Projected Carbon Emissions

Metric:

Estimated metric tons of carbon dioxide equivalents (MMTCO₂e) in 2012:

25.34 MMTCO₂e

Geography: statewide

Summary:

In 2012, there 25.34 million metric tons of carbon dioxide equivalents (MMTCO₂e). This amount is expected to increase to 31.36 MMTCO₂e in 2025, and 42.93 MMTCO₂e in 2050. Carbon dioxide (CO₂), the main driver of climate change, has an atmospheric residence time ranging from decades to hundreds of years and will remain in the atmosphere for, an average, 100 years once released.
